

Here's a professionally redefined version of your work points. This format is suitable for **timesheets, performance appraisals, project documentation, CVs, or work reports.**

Progress Module

UI/UX Development

- Designed and developed a responsive user interface using Bootstrap.
- Implemented responsive card layouts and a two-step wizard interface.
- Added navigation controls including **Back to List**, **Previous**, and **Next** buttons.
- Ensured responsive design compatibility across desktop, tablet, and mobile devices.

Form Development & Validation

- Implemented date picker controls with read-only input support.
- Applied date validations including:
 - Past date restriction (where applicable)
 - Future date restriction
 - Activity Start Date dependency
 - Date format validation (dd-MM-yyyy)
- Developed mandatory field validations for all required inputs.
- Implemented dropdown, radio button, textarea, and date validations using jQuery.

Reporting Functionality

- Developed "Reporting As On Date" functionality with:
 - Date picker integration
 - Activity Start Date validation
 - Future date restriction
 - Required field validation
- Implemented database binding and data persistence for reporting records.

Dynamic Form Logic

- Implemented **Flagship Alignment** functionality with Yes/No radio buttons and mandatory selection.
- Developed **Level of Fund Utilization** dropdown with database-driven values.
- Implemented dynamic **Implementation Challenges** section:
 - Display additional remarks textbox when "Yes" is selected.
 - Hide textbox when "No" is selected.
 - Applied conditional validation logic.
- Implemented **Suggestions for Strengthening Partnership** textarea with 500-character limit and validation.

Validation Implementation

- Developed comprehensive client-side validation using jQuery Validation.
- Implemented server-side validation using ASP.NET Core Model Validation.
- Added SQL-level validation to ensure data integrity.

Database & CRUD Development

- Designed database tables for the Progress Module.
- Developed stored procedures for:
 - Insert
 - Update
 - Get By ID
- Implemented complete Create, Read, Update, and Edit functionality.
- Managed database transactions with proper exception handling.

Navigation Workflow

- Implemented **Next** button workflow:
 - Validate form
 - Save record
 - Redirect to Step-2
 - Maintain generated Record ID
- Implemented **Previous** button workflow while preserving user-entered data.

Edit Functionality

- Developed Edit functionality to:
 - Retrieve existing records
 - Bind saved data
 - Update records
 - Preserve workflow consistency
-

Security Enhancement

- Performed security requirement analysis.
 - Fixed identified application vulnerabilities.
 - Implemented secure coding practices.
 - Strengthened input validation mechanisms.
 - Improved authentication and authorization controls.
 - Conducted security testing and bug fixing.
-

Activity Master Module Enhancements

- Added **Sector Selection** dropdown functionality.
 - Introduced **Activity Start Date** and **Activity End Date** fields.
 - Modified Add/Edit screens.
 - Updated Save and Update APIs.
 - Modified Stored Procedures.
 - Performed required database schema updates.
 - Completed unit testing and validation.
-

Sub Activity Module Enhancements

- Added **Sub Activity Start Date** and **End Date**.
 - Updated Add/Edit user interfaces.
 - Modified Save and Update APIs.
 - Updated Stored Procedures.
 - Implemented database changes.
 - Added validation logic.
 - Performed end-to-end testing.
-

Task Module Enhancements

- Added **Task Start Date** and **Task End Date**.
 - Developed Add/Edit Task screens.
 - Implemented Save and Update functionality.
 - Updated Task display screens.
 - Added validation rules.
 - Modified database objects.
 - Conducted functional testing.
-

Activity Geographic Level Mapping

- Designed database structure for geographic mapping.
- Implemented mapping for:
 - State
 - District
 - Block
 - City

- Enhanced Activity Master for geographic selection.
 - Integrated mapping into the Task Module.
 - Developed supporting APIs.
 - Created Stored Procedures.
 - Completed integration and testing.
-

Activity Reporting Workflow Enhancement

- Redesigned Reporting Step-1 user interface.
 - Enhanced date validation rules.
 - Updated reporting APIs.
 - Redesigned Edit Reporting Step-1 functionality.
 - Implemented record binding for existing reports.
 - Developed Draft and Final Submission workflow.
 - Redesigned Parent Report screen.
 - Developed Report History functionality.
 - Implemented New Progress Report creation workflow.
-

Best Practice Master Module

- Designed database architecture.
 - Developed Add, Edit, Delete, and List functionality.
 - Built CRUD APIs.
 - Developed Best Practice Cover Page.
 - Developed Best Practice Detail Page.
 - Integrated Geographic Mapping functionality.
-

Media Upload Module

- Developed activity-wise media upload functionality.
- Implemented upload support for:
 - Cover Images
 - Gallery Images
 - PDF Documents
 - Video Files
- Integrated media storage with the database.
- Implemented file validation.
- Performed testing and quality assurance.

Key Technologies Used

- ASP.NET Core MVC
- C#
- SQL Server
- Stored Procedures
- Entity Framework / ADO.NET
- Bootstrap 5
- jQuery & jQuery Validation
- JavaScript
- HTML5 & CSS3
- AJAX
- Responsive UI Design
- Secure Coding Practices
- REST APIs
- Transaction Management

This version is suitable for **weekly status reports, performance reviews (KRA/KPI), project documentation, and resume/project portfolio**, presenting your work in a professional and structured manner.
